

Every Zepto trip looks almost the same

The same shape on almost every visit. Open → grab a few things → checkout. The rest of the mission, and the rest of the app, never gets explored.

A TYPICAL ZEPTO TRIP

HOW IT HAPPENS
Open, grab the few things top of mind, checkout. The trip stays inside one or two categories and never wanders.

THE RESULT
Most trips touch only one or two categories. Travel, health, home and personal care sit one tap away and stay unopened.

THE IMPACT FOR ZEPTO
Fewer customers ever try a new category. Baskets stay small and the monthly growth goal stalls.

Awareness isn't the problem. Exploration is

Three different sources. One consistent finding.

REVIEWS · WHAT PEOPLE SAID

4,398
reviews analysed

RECURRING THEME

 **"Emergency grocery app"**
not a place to discover

"good place to get the grocery on urgent basis" · 5★

SURVEY · WHAT WE MEASURED

8 of 14
mainly use Zepto for groceries
Most journeys never leave grocery.

13 of 14
know Zepto sells other categories
Awareness already exists.

10 of 14
would explore more if it matched their goal
Interest exists. Discovery doesn't.

INTERVIEWS · WHAT PEOPLE TOLD US

 "I always end up buying the same things."

 "I know Zepto has beauty, but I never think to check there."

 "For anything beyond groceries, I open Amazon."

Research base: 4,398 public reviews + 14 survey responses + user interviews.

SOURCES
 [Survey Form ↗](#)
 [Survey Responses ↗](#)

People don't ignore new categories. They simply never reach them.

Not every review became an insight

We only kept patterns that consistently appeared across reviews, surveys and interviews.

FROM ONE REVIEW TO ONE VALIDATED INSIGHT

WHAT WE KEPT VS WHAT WE REJECTED

88
kept. Every one backed by a real quote.
We chose accuracy over interesting findings.

56
rejected. No supporting evidence.

WHAT MADE AN INSIGHT COUNT

- ✓ Public reviews only
- ✓ Every insight linked to a source
- ✓ Survey validated with interviews
- ✓ Unsupported claims removed

EXPLORE THE RESEARCH

Ask it questions like

Why don't people explore?

Which complaints appeared most?

Show reviews about discovery.

Every answer links back to a real review.

RESEARCH OUTPUTS ✓ Behaviour patterns ✓ Discovery barriers ✓ Validated insights ✓ Supporting quotes

Research scope · 4,398 verified public reviews · survey responses · user interviews · public sources only

The biggest opportunity isn't every shopper. It's frequent grocery loyalists

We grouped shoppers from our survey, interviews and review patterns across two behaviours: how often they shop and how widely they buy.

Frequent grocery shoppers don't need another category. They need help completing the goal they already came for.

Four behaviours in the research. We build first for grocery loyalists

We mapped every interview to four behavioural segments. One group showed the largest, most repeated behaviour and the biggest untapped category.

FOUR SEGMENTS · N=14 PATTERNS

Priya, 29 · **PRIMARY** 8 patterns
Grocery loyalist
Orders 3–4x/week after work. Knows the other tabs exist; never opens them.

Rahul, 24 · Habitual explorer 3 patterns
Groceries plus Beauty, Home, Personal Care — already converted.

Occasional buyers 2 patterns
Too few visits to build a habit.

Curious dabblers 1 pattern
Try new categories on their own.

★ **GROCERY LOYALISTS · RECURRING PATTERNS**

- Open Zepto with one shopping mission.
- Keep the shopping list in their head.
- Finish only remembered groceries.
- Rarely enter another category.
- Missing items bought elsewhere later.
- Repeats several times every week.

Largest repeat behaviour + largest exploration gap = strongest MVP

MVP SCORECARD · LOYALISTS WIN EVERY ROW

	GL	HE	OB	CD
Visit frequency	●●●	●●●	●●●	●●●
Trust	●●●	●●●	●●●	●●●
Repeatability	●●●	●●●	●●●	●●●
Growth upside	●●●	●●●	●●●	●●●
Measurability	●●●	●●●	●●●	●●●
Cross-category gap	●●●	●●●	●●●	●●●

GL Grocery loyalists · HE Habitual explorers · OB Occasional buyers · CD Curious dabblers. More dots = stronger on that dimension.

⚠ **The trade-off: loyalists are also the costliest group to get wrong — one bad suggestion spends their trust. The guardrails on slide 10 exist for exactly this.**

RESEARCH SUMMARY

✓ Largest cluster

✓ Highest repeat usage

✓ Highest trust

✓ Lowest exploration

✓ Biggest upside

The best MVP is the segment with the highest repeat behaviour and the biggest untapped opportunity. Grocery loyalists satisfy both.

Zepto sees what you searched, but never the goal you came in for

Grocery loyalists are not blocked by choice. They are blocked by an app that reads products, not missions, so the goals that would span categories stay invisible.

TARGET USER

★ Grocery loyalists

- Shop multiple times every week.
- Arrive with one clear mission.
- Already trust Zepto.
- Rarely browse.
- Keep the shopping list in their head.

They don't need product discovery. They need mission completion.

ROOT CAUSE CHAIN

THE RESULT
Every visit reinforces grocery-only behaviour, because the broader mission is never recognised.

ROOT CAUSE SUMMARY

- The app understands products.
 - The shopper thinks in missions.
 - Nothing connects the two.
- The missing input isn't a recommendation engine. It's understanding intent before checkout.

PRODUCT IMPLICATION

- Understand the mission.
 - Predict the goal behind the cart.
 - Ask one lightweight confirmation.
 - Then complete the mission.
- AI acts only when confident. The shopper stays in control.

The job of AI is not to recommend more products. It is to understand the shopping goal first, then quietly complete it.

Solving this keeps the whole shopping mission inside Zepto

Who we build for, what actually breaks, the value it unlocks, and why the moment is now.

WHAT IS THE REAL PROBLEM?

- Shoppers think in missions, not categories.
- Zepto sees each search, never the intent.
- Discovery needs manual category browsing.
- Cross-category needs stay invisible.

Hosting friends · sees chips and soft drinks, misses Party, Home and Cleaning.

WHO FACES THIS PROBLEM?

★ **Primary target · Grocery loyalists**

- Visit most often, already trust Zepto.
- Rarely explore beyond groceries.
- Finish shopping fast.
- Best group to shift behaviour.

8/14
mainly groceries

13/14
aware of range

10/14
would explore

WHY BUILD THIS NOW?

- ✓ Discovery interest already exists.
- ✓ Awareness is already high.
- ✓ Shoppers already trust Zepto.
- ✓ The missing piece is contextual discovery.
- ✓ AI makes reading intent practical now.

WHAT VALUE IS CREATED?

 **For shoppers**

- ✓ Less to hold in your head.
- ✓ One mission instead of many separate searches.
- ✓ Relevant products surface naturally.
- ✓ Fewer forgotten purchases.
- ✓ Finish in one trip, not on Amazon later.

 **For Zepto**

- ✓ Higher cross-category adoption.
- ✓ Larger basket sizes.
- ✓ Better category penetration.
- ✓ More repeat purchases.
- ✓ More missions completed on Zepto.

People already arrive at Zepto with bigger goals. Help them finish those goals, and cross-category shopping follows on its own.

Understanding the shopping mission unlocks cross-category discovery

The AI reads the cart, names the mission, then plans the basket across categories. [Try the live prototype ↗](#)

SAME REASONING ENGINE Beach day Birthday party Camping Moving home Weekend trip

EXPECTED PRODUCT IMPACT ✓ More categories discovered ✓ Larger baskets ✓ Forgotten purchases recovered ✓ Higher repeat usage

Recommendation engines rank products.
Smart Missions build **complete shopping plans**

RECOMMENDATION ENGINE → SMART MISSIONS

WHAT IT UNDERSTANDS
Products → The shopping goal

HOW IT THINKS
Similarity → Reasoning

WHAT IT PRODUCES
Another product → A complete basket

THE MVP, PROVING IT, STEP BY STEP

- ✓ 5 products added
- ✓ 3 categories
- ✓ Basket completed
- ✓ New category discovered

Recommendation engines optimise products. Smart Missions optimise shopping outcomes. [Try the live MVP ↗](#)

Proving it works in production, then rolling it out safely

One north star, a metric tree beneath it, guardrails that must hold, and a staged rollout that earns each step.

★ NORTH STAR METRIC

↑

Cross-category purchases

per weekly active grocery shopper

One metric everything else supports. Did behaviour actually change, not just clicks.

METRIC TREE · FROM SIGNAL TO OUTCOME

INPUT

Mission detection accuracy
Mission acceptance rate

→

OUTPUT

Cross-category purchases
Categories per order

→

★ NORTH STAR
